

ICT: at the heart of the digital transformation

4G networks, fibre optics, cell phone coverage, cloud and many more. Responding to the growth in demand for high-performance telecommunications infrastructure and services coming from private individuals, companies and local authorities is decisive if we want to meet one of society's greatest challenges: the digital transformation.

Mobile telephone operators and service providers, enterprises and the public sector are all focusing on the same concern: developing their infrastructure and digital solutions. This explains the substantial investments being made across all the different networks: expanding infrastructure for mobile telephony, integration of networks for companies and local authorities, and the rollout of fibre optics to end users, etc.

A booming market for VINCI Energies

Through the brand [Axians](#), VINCI Energies provides its customers with a profound ICT expertise as well as innovative customized solutions: software solutions, cloud and data center solutions, enterprise networks and collaborative solutions, telecommunications infrastructure, etc. This way, Axians offers a complete range of top-notch, scalable and sustainable IT services and solutions for enterprises and for the public sector.

Following recent acquisitions, VINCI Energies' range of offerings has expanded considerably. The telephony infrastructure, network and data transport are added benefits including data storage, servers, software application development and IT security. Axians positions in segments experiencing strong growth as the Internet of Things, the city connected or 4.0 industry. She is able to offer a comprehensive approach to these issues, both locally and internationally. Axians Belgium is the leader in Belgium in TETRA communication with more than 60% of marketshare, and is also a leader in Europe in dedicated "on board communication systems" (Tetra & DMR) for public transport (RATP, STIB, SNCB, etc...)
