

VINCI Energies' fields of expertise

VINCI Energies accelerates the roll-out of new technologies and support two major changes: the digital transformation and the energy transition.

VINCI Energies delivers a customised solution for each individual project, from the smallest to the most complex, in order to meet our customers' challenges in terms of performance, reliability and **safety** in our four main areas of expertise: electricity, HVAC, mechanical engineering and **information and communications technologies (ICT)**.

With their agile organizational structure, VINCI Energies business units work in the following four families of business activities throughout the life of the projects:

- Project design / engineering
- Implementation / integration
- Maintenance
- Operation / facility management

Local presence with global support

VINCI Energies' 1,600 business units maintain their identity and autonomy, providing the required responsiveness and benefiting from historically strong roots in their local markets. This has allowed our business units to develop in-depth knowledge of each of our customers' processes. This expertise makes it possible to provide the solutions best suited locally to meet specific customer demands.

This local service spirit is combined with a strong service culture and networking capacity. These advantages strengthen the ability of the VINCI Energies' teams to take the initiative. Networking, synergies and collaborative work allows the business units to pool their expertise to provide high-tech, comprehensive solutions combined with a number of added-value services.

VINCI Energies has clearly demonstrated its willingness to partner up in the long term with all of its customers who trust the solutions VINCI Energies offers. This partnership spirit is based on two pillars: presence on the local market thanks to a vast network and support for our customers in their projects around the world.

OUR BUSINESS LINES

> **Infrastructure: at the heart of the energy transition**

> **Industry: improving industrial performance**

> **ICT: at the heart of the digital transformation**

> **Service sector: making buildings smarter and more sustainable**
